About Us And Who We Are

At **SA Oil Solutions** we put customers first by offering specialised lubrication solutions. Our industry proficient staff can make qualified recommendations to customers about the best products to use in any application. Through our interactive process, we cultivate long lasting sustainable business relationships.

WHO WE ARE

SA OIL SOLUTIONS (PTY) LTD was established in 2017. Since it's inception we have grown into a key role player within the South African lubricants market with a large footprint in various industries.

OUR VISION

To always offer our customers a professional and informative service in regards to the latest lubrication technology that will ensure their profitable growth through sustainable value.

OUR MISSION

To take hands with our customers throughout South Africa by equipping them with knowledge in the proper use of lubrication and educating them about the latest technology of oil. This will enable us to consistently, efficiently and transparently deliver world class lubrication.

OUR PROMISE

Whether you are specialists or novices in the field of lubrication, **SA OIL SOLUTIONS (PTY) LTD** is committed to supporting you by offering tailored services and recommendations. We make every effort to provide close support to our clients, high standards of service and trusted quality.

OTHER AVAILABLE BRANDS:

Dust Suppression

UTULI Dust Suppression, a division of SA OIL SOLUTIONS PTY LTD, offers a comprehensive range of products for effective dust management in various industries. Our solutions cater to permanent and temporary mine haulage roads, public and municipal gravel roads, and tailings facilities. We proudly serve the Mining, Industrial, and Agricultural sectors with our diverse product range.

Our expertise extends to designing, building, and installing innovative dust suppression technologies for plant areas and stockpiling points. We provide a total dust management solution, encompassing dust monitoring and reporting, road dust management, and maintenance services.

Our products are 100% biodegradable, derived from an organic material production process, ensuring a negligible environmental impact. We adhere to stringent quality controls throughout the design, development, manufacturing, supply, and application of our products, guaranteeing a quality yet cost-effective solution for our clients.

In addition to our dust suppression solutions, **SA OIL SOLUTIONS PTY LTD** is also a key supplier of sodium lignosulfonate to various fertilizer manufacturers. Our high-quality product serves as a crucial binding agent in the production of fertilizer granules, enabling our clients to create effective and efficient fertilizers for the agricultural industry. By providing this essential component, we play a vital role in supporting the global food supply chain and contributing to sustainable agricultural practices.

Equipment Installations/ Lube Facilities

We have a team that has in excess of 50+ years experience under the belt in the Workshop Lube Equipment Industry for both the OEM, Mining, Independent, Commercial and Passenger Vehicle Workshops.

We currently provide a Turn-Key solution to the Mining Industry Workshops and Automotive OEM Workshop Equipment ie: Design (with dedicated outsourced engineering/design teams), Supply, Installation and Maintenance of all related equipment. The equipment list includes Bulk Oil tanks (new oil & grease dispensing), both 2 and 4 post vehicle hoists, Screw Type and Piston Type Compressors, Oil Management Systems as well as Old Oil Extraction Systems, HP Greasing Systems and all related Hose Reels.

We have over the years designed, project managed and overseen many OEM workshop installations from the Architect Inception Drawing phase right through to completion when the first vehicle is serviced with the Lubes Equipment by the OEM.

Mercedes Benz, BMW, Land Rover, Toyota, Hyundai, Kia, Isuzu, GM, International Trucks, Scania Trucks and MAN are some of the OEM Workshops that our teams have overseen and managed the various lube and hoist installations in.

Over the years several mining sites' HVM workshop bulk lube installation systems have been successfully completed. OEM mining equipment workshops such as Komatsu, Bell and numerous others have also been completed in recent years.

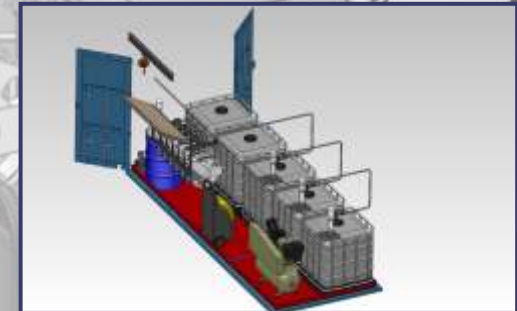

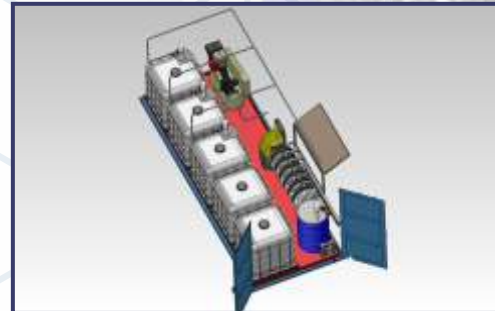

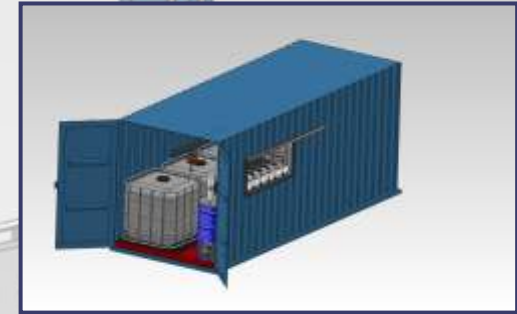

Mobile Lube Facilities/ Specialised Filtration

At **SA OIL SOLUTIONS PTY LTD** we design and manufacture Mobile Lube Facilities. These systems are tailor made to each client's needs and are kitted out inside 6m / 12m shipping containers. These are ideal for mining sites where permanent structures for workshops are not yet in place, but where contamination control and usage consumption control is still of great importance or where mining activities move to new areas on a regular basis. These mobile units can be moved around with great ease by means of forklifts or other handling equipment.

Additional to lube system and equipment installation we also specialize in depth filtration & lubrication systems, both mobile as well as fixed systems, which are implemented on bulk tanks in order to keep contamination to a minimum by implementing best practices from a tribology point of view. These systems can be implemented on both oil and fuel systems. Onboard higher efficiency equipment filtration systems can be installed directly on OEM yellow equipment as a bypass filtration system for continuous contamination control while equipment is in operation.

We have and always aim to ensure the highest level of service, quality, communication and HSSE compliance on all projects undertaken.
